+ 36 Machine Translation Engines

Tone of voice

Automated post-editing · Gender control

Transliteration

Source quality improvement · Grammar correction

Protect entities · Decode HTML entities

Work as usual. Spend less. **Do 20x more.**

→ Seamlessly integrate AI into your systems and vendors to produce multilingual content at scale in over 450 languages, meeting the surging demand for translation.

→ We support all TMS and have flexible API integration.

Maximize **translation quality** with best-fit engines tailored to your needs

→ Use machine translation engines customized with your data, evaluated and continuously improved with MT Evaluation and MT Maintenance.

→ Employ source quality improvement (SQI) and automatic post-editing (APE), including tone of voice, consistent terminology, gender control, and other features to achieve 98% user acceptance of translation.

→ Connect to 40+ machine translation providers with a single integration to ensure the highest quality translation for your languages and domains.
